In the Claims:

Amend the claims as follows:

5

1.   (Currently amended) Method in a mobile telecommunication
network for obtaining location and time information about
users, the telecommunication network comprising one or more
10   user terminals, a service entity, a time-stamp server and an
operator, the method comprising the following steps:
        a) creating a digital content,
        b) storing ~~said~~ the digital content in a user terminal,
        c) retrieving location data from the user terminal,
15   d) digitally signing the ~~content of c)~~ location data in
~~said~~ the user terminal, ~~and before or after step d)~~,
        e) distributing of ~~the~~ a signed combination of the
digital content and the location data to a trusted third
party for time-stamping, and
20   f) the trusted third-party time-stamping the signed
combination. ~~content, of the foregoing steps by the trusted
third party~~.

2. (Currently amended) ~~Method of claim 1, c h a r a c t e r i~~
25   ~~z e d in that~~ The method according to claim 1 wherein the
digital signing is performed after step c), and whereafter
the combination of signed content and location data is time-
stamped.

30   3. (Currently amended) ~~Method of claim 1 or 2, characterized
in that~~ The method according to claim 1 wherein the digital
content is created in step a) is a text file or a voice
message.

35   4. (Currently amended) ~~Method of claim 1 or 2, characterized~~

RF 502.1136USN 12/29/04   - 3 -

~~in that,~~ The method according to claim 1 wherein the digital content is created in step a) by taking a picture with a digital camera.

5   5. (Currently amended) ~~Method of claim 4, characterized in that~~ The method of claim 4 wherein the digital camera is linked with ~~the~~ a mobile device, ~~which gets the picture directly~~ that directly receives the picture.

10   6. (Currently amended) ~~Method of claim 4, characterized in that~~ The method of claim 4 wherein the digital camera is a separate network element, ~~whereby~~ and the picture taken by the digital camera is downloaded to a work-station and thereafter sent to ~~the~~ a mobile station.
15

7. (Currently amended) ~~Method of any of claims 1-6, characterized in that~~ The method according to claim 1 wherein the digital signature is performed in step c) with ~~the~~ a user's private key stored in the user terminal.
20

8. (Currently amended) ~~Method of claim 7, characterized in that~~ The method according to claim 7 wherein a PIN code is entered by the user to access the private key.

25   9. (Currently amended) ~~Method of any of claims 1-8, characterized in that~~ The method according to claim 1 wherein location data is retrieved from the user terminal during ~~the~~ a signature process as an attribute, which is separately signed.
30

10. (Currently amended) ~~Method of any of claims 1-9, characterized in that before signing the location data, it~~ The method according to claim 1 wherein the location data is translated to understandable geographical data before the
35   location data are signed. ~~such as coordinates.~~

11. (Currently amended) ~~Method of any of claims 1-10,~~ ~~characterized in that~~ The method according to claim 1 wherein the signed combination is distributed to ~~the~~ a work-station
5   for time-stamping.

12. (Currently amended) ~~Method of any of claims 1-11, c h a r a c t e r i z e d in that in step d)~~ The method according to claim 1 wherein the location data is retrieved from the user
10   terminal over-the-air through an application residing in ~~the~~ a work-station.
